Disclaimer: The Idaho Geological Survey does not guarantee
Mines and Prospects data to be free of errors nor assume liability
for interpretations made from this data, or decisions based
thereon.

This KMZ file created using Mines and Prospects
database version 1.2023.1 from the Mines table.

Some fields in the Mines table for in-house
maintenance procedures were removed, and a
field for Ownership (Surface Management) added.
This reduced file size and increased usability of
the file on portable devices with limited screen
space.

This table was imported into ArcGIS 10.8.1 to create the
KMZ file.

These data tested on Windows 10 platform with Google
Earth, and on LG G5 Android 6.0.1 with Google Earth
app.
